**Qualcomm Announces mHealth Momentum in Europe with New Customers and Technology Partners including vitaphone, Solutions4Health and DELTA**

ROME, ITALY – September 27, 2013 – Qualcomm Incorporated (NASDAQ: QCOM) today announced that its wholly-owned subsidiary, Qualcomm Life, Inc., has established increasing momentum across multiple key European geographies including Germany, the United Kingdom and Scandinavia with the addition of new telehealth service customers. vitaphone health solutions, Solutions4Health and DELTA are leveraging the open, interoperable 2net™ Platform and 2net Hub to efficiently address chronic disease management, growing the global Qualcomm Life Ecosystem to over 270 medical device and health care services companies, and health care providers, payers and accountable care organizations.

[vitaphone health solutions](#), a leading provider and pioneer of mHealth in Germany and in the United States and a full service provider for care management, telemonitoring, telemedicine devices and patient coaching, will leverage the 2net Platform and Hub in its future and currently deployed mHealth systems. 2net will wirelessly connect medical devices used by thousands of patients so that biometric data can be seamlessly shared with the patients' physicians and care team to support diagnosis, treatment decisions and treatment monitoring.

“Our goal is to enhance the quality of care for patients while implementing cost savings for insurance providers, and the [2net Platform](#) is our connectivity solution of choice as it will significantly enhance our ability to provide quality services and ease of use while enabling us to meet our growth and expansion objectives,” stated Walter Schmid, CEO, vitaphone health solutions. “Because the Qualcomm Life Ecosystem is interoperable, it provides the scalability and flexibility required for us to continue to grow while potentially reducing our operational costs. Qualcomm Life’s expanding footprint will also enable us to penetrate North America and other regions where 2net is an established and supported technology.”

In addition to its expansion into Germany, Qualcomm Life also announced its collaborations with UK-based [Solutions4Health](#) and Denmark-based [DELTA](#). Solutions4Health is an independent provider of telehealth and health improvement services including chronic disease self-management, health trainer services, coronary heart disease prevention advice, sexual health, and smoking cessation services. DELTA is an independent technology company based in Denmark offering ePatch<sup>®</sup>, a discreet body-worn sensor which adheres to the skin that records, stores and wirelessly transmits the wearer’s ECG, heart rate, and activity and motion data.

“We are pleased to be working with some prominent names in telehealth who have pioneered unique solutions that enable physicians to provide efficient, effective care and that engage patients in preventive self-care,” said Laurent Vandebrouck, managing director of Qualcomm Life in Europe. “By leveraging 2net technology, these companies now have access to one of the largest open and non-exclusive ecosystems of medical device and service companies in the mobile health industry.”

Significant pilot trials of mHealth tools and solutions to remotely monitor patients with chronic diseases have been conducted by hospitals in Europe and demonstrated the ability to reduce hospital readmissions, length of stay, and the associated costs. The 2net Platform and services give telehealth service providers a wireless communications technology that can scale and flex with them as they move from pilot projects to mass-market adoption.<sup>1</sup>
