

Powering Intelligent Care Everywhere

In the hospital, at home,
and all points in between.

Two industry leaders come together to shape connected health across the care continuum and power **Intelligent Care Everywhere**.

- One of the world's largest connected health ecosystems
- One of the first global end-to-end solutions for flexible in-hospital and in-home connectivity and data integration
- A secure, scalable medical-grade connectivity infrastructure

Qualcomm Incorporated: *Inventing breakthrough mobile experiences*

For 30 years, Qualcomm has led the mobile evolution, with ideas and inventions that have shaped what is now the fastest-growing technology platform in human history¹. Qualcomm continues to push the boundaries of possibility by creating the connectivity fabric and chipsets for the Internet of Things (IoT), which will link 26 billion objects over the next five years².

Qualcomm Life, Inc.: *Powering intelligent care everywhere*

Qualcomm Life is enabling new connected care models by liberating vital data and unlocking insights in the hospital, at home and all points in between. Our open, enterprise-grade infrastructure connects to one of the world's largest health care ecosystems to inform care and make intelligent care anywhere, anytime, a reality.

Capsule, a Qualcomm Life Company: *Unlocking the power of medical device data*

A global leader in medical device integration and clinical data management, Capsule's core platform, SmartLinx Medical Device Information System (MDIS), is a product built from 19 years of experience. Capsule's platforms connect, monitor, integrate and analyze data into the EMR and other intelligent enterprise systems. Capsule enables rapid and secure data management that has the power to enhance clinical workflows and improve operational efficiencies.

Connected Platforms to Unlock, Inform and Scale New Care Models

smartlinx™ Medical Device Information System

SmartLinx™ Medical Device Information System (MDIS)

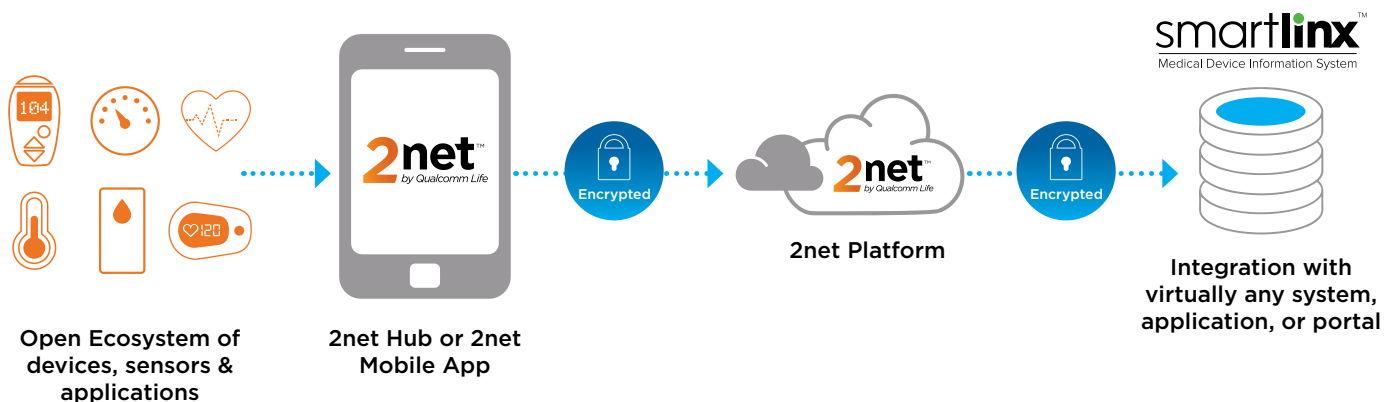

Capsule's SmartLinx MDIS is health care's first system dedicated to capturing, harnessing and unlocking the power of data from all medical devices found across the health care enterprise.

2net™ by Qualcomm Life

2net™ Platform

A scalable, cloud-based system that enables end-to-end medical-grade connectivity in the home and on the go, and integrates with virtually any system, application or portal.

Unlock

Flexible Connectivity Across Care Settings

- **SmartLinx** offers four enterprise connectivity options that meet virtually any connectivity need
- **2net Hub** integrates short-range radios including Bluetooth, Bluetooth Smart, and Wi-Fi for flexible connectivity and an effortless user experience
- **2net Mobile** offers customers Bring-Your-Own-Device (BYOD) flexibility by integrating with market-leading mobile devices and operating system (OS) combinations

Open, Vendor-Neutral Design

- **SmartLinx** delivers one of the industry's largest dynamic libraries of medical device driver interfaces (DDIs), with over 750 drivers that read and translate device protocols
- **2net** offers an open device-and application-agnostic design with a choice of secure mobile gateways, connecting to an expansive array of devices, apps, sensors and therapeutics

Secure Medical-Grade Infrastructure

- **SmartLinx** uses and supports the latest HTTPS, VPN tunnels for point-to-point communications, and WPA2 Enterprise for Wi-Fi network access
- **2net** delivers end-to-end connectivity designed to meet FDA and HIPAA safety and privacy standards, with 11 layers of authentication, encryption and access control

Inform

Informing Early and Appropriate Interventions

- **SmartLinx** offers analytic tools and an Early Warning Scoring System (EWSS) to help clinicians rapidly recognize signs of physiological deterioration
- **2net and 2net Mobile** integrate vitals for emerging remote care models by delivering timely medical-grade connectivity in and outside the home—wherever the patient may be

Transform

Enhanced Clinical Workflows

- **SmartLinx™ Vitals Plus™** accurately charts vitals and patient-specific information and supports charting of configurable vital signs modifiers, and custom vitals all on a single screen, for faster entry and streamlined clinical workflows

Powering New Care Models

- **2net-enabled medical-grade remote care** is powering 'admit to home' care models, supporting the shift of care to lower-cost care settings while reducing the risk of readmissions

Powering Intelligent Care Everywhere

Qualcomm Life and Capsule are harnessing the power of data to improve care delivery and operational efficiencies. Through our smart, flexible platforms, we're enabling our customers to establish new standards for timely, informed and patient-centered care.
